

ECODRY DRYING CABINET

ADFG-6

Firefighters risk their lives every day and depend on their equipment to protect them against the demanding and dangerous environment in which they work. The last thing they need to worry about is their firefighters' turnout gear. This is why ADC, the world leader in drying technology, is offering the ADFG drying cabinet—designed specifically for drying firefighter turnout gear.

Unlike a traditional tumble dryer that may not be able to effectively dry these heavier, bulkier garments, the ADFG drying cabinet allows for gear to be hung inside, so warm air can circulate through coats, pants, gloves and boots. This ensures that all items are dried, avoiding any water getting trapped in seams or pockets. This guarantees the firefighters' comfort and prolongs the life of their equipment.

MICROPROCESSOR CONTROLS

The phase-7 microprocessor takes the guesswork out of drying! ADC was the first company to develop a microprocessor for commercial and industrial dryers and the phase-7, one touch micro, incorporates the same technology making drying simple and error-free. With six factory presets and the ability to add and modify additional cycles, one touch is all it takes. Depending on the number of items, the micro can be set to dry for up to four hours. Press the button and walk away.

HEAVY-DUTY CONSTRUCTION

Completely manufactured in Massachusetts, the ADFG is constructed using heavy-duty, cold-rolled steel with reinforced base, sides, and door panels. Finished with the most durable powder coating, baked on at 425° fahrenheit, the ADFG ensures years of performance under the heaviest conditions. (A full stainless steel cabinet is also available as an option.)

STANDARD FEATURES

- Red or white cabinet
- Dries six sets of turnout gear
- Six removable coat and pants hangers
- Self-diagnostic microprocessor control
- Two independent heating and fan systems
- Directed airflow
- Solid construction
- Drainage basin

OPTIONAL FEATURES

- Glove hanger
- Boot hanger
- Adjustable single shelf
